Minor Project (PRCS-102)

Session: Jan-May, 2026

Group No: 26

Students Details with signatures

Student 1 Name and Sign: Ekampreet Singh

Student 2 Name and Sign: Gaurav Prashar

Student 3 Name and Sign: Gaurav Sharma

Previous Title:Blockchain Secure Vault

Previous Objectives:

1.To securely upload documents using SHA-256 hashing and blockchain technology.

2.To encrypt and store documents on IPFS using AES -256 encryption standard ensuring secure and decentralized storage

3.To Implement a secure document dashboard with browser view, verification and download options.

4.To verify the validity of a document uploaded onto the blockchain.

Revised Objectives: If applicable

1.To design and deploy smart contracts on a blockchain platform for storing SHA-256 document hashes, ensuring immutability and transparency of records.

2.To encrypt documents using the AES-256 encryption standard and store the encrypted files on IPFS to provide secure and decentralized storage.

3.To develop a secure document management dashboard that allows users to upload, view, verify, and download documents through a browser-based interface.

4.To implement a verification mechanism that allows users to confirm the authenticity and integrity of documents by comparing their cryptographic hashes with blockchain records.
